Sales Dashboard – Project Documentation

1. Project Overview

This project presents a fully interactive **Sales Performance Dashboard** built using Microsoft Excel. The dashboard provides insights into sales trends, product performance, regional distribution, and category contribution. It is designed to support decision-making by offering dynamic filtering and clear visualizations.

2. Dataset Description

The dataset contains **100 sales transactions** with the following fields:

- **Order ID**
- **Date**
- **Product**
- **Category**
- **Region**
- **Quantity**
- **Unit Price**
- **Discount**
- **Total Revenue**
- **Month**
- **Month #**

The data was cleaned, validated, and prepared for analysis before building the dashboard.

3. Data Cleaning & Preparation

Key cleaning steps performed:

- Ensured all dates were in valid format
- Calculated **Total Revenue** using:

$$Quantity \times Unit\ Price \times (1 - Discount)$$

- Extracted **Month** and **Month #** for trend analysis
- Standardized product, region, and category names
- Verified no missing or duplicate records
- Validated totals across all PivotTables

📊 4. Key Metrics (KPIs)

The dashboard highlights the following KPIs:

KPI	Value
Total Sales	35,257.50
Top Product	Laptop
Top Region	North
Average Order Value	$352.58

These KPIs provide a quick snapshot of overall performance.

📈 5. Visualizations Included

The dashboard contains four main visual components:

1. Monthly Sales Trend (Line Chart)

Shows sales performance from **May to November**, highlighting seasonal patterns.

2. Top Selling Products (Bar Chart)

Ranks products by revenue, with **Laptop** as the top performer.

3. Sales by Category (Donut Chart)

- Electronics: 71%
- Furniture: 29%

4. Sales by Region (Donut Chart)

- North: 51%
- East: 19%
- South: 16%

- West: 14%

🎛️ 6. Interactivity Features

The dashboard is fully interactive using:

- **Month Slicer**
- **Region Slicer**
- **Category Slicer**
- **Timeline Filter (2023)**

All charts and KPIs update instantly when filters are applied.

🛠️ 7. Tools & Techniques Used

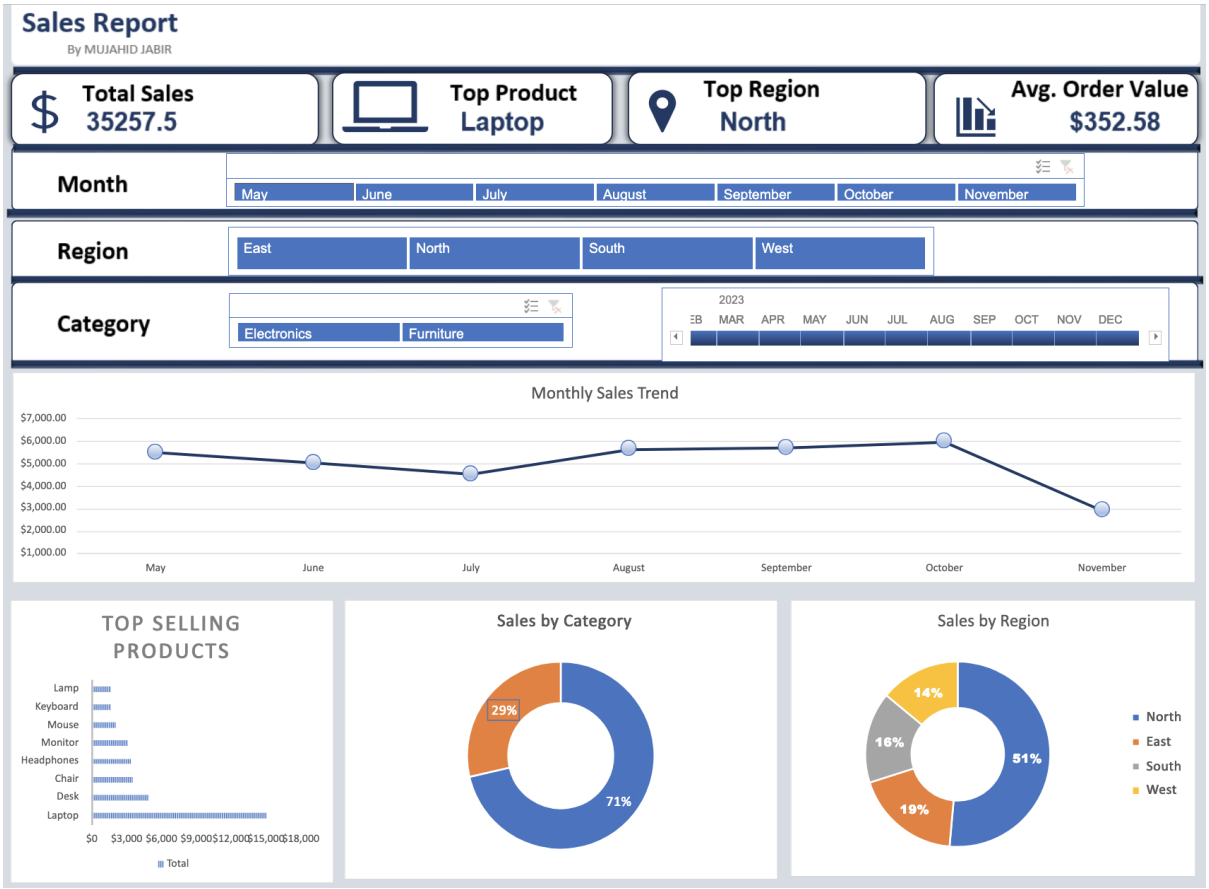
- Microsoft Excel
- PivotTables
- PivotCharts
- Slicers & Timeline
- Data Cleaning
- KPI Design
- Dashboard Layout & Formatting

🎯 8. Purpose of the Dashboard

This dashboard helps users:

- Track monthly sales performance
- Identify top-selling products
- Analyze regional sales distribution
- Compare category contributions
- Make informed business decisions

🖼 9. Dashboard Preview



🏁 10. Conclusion

This project demonstrates strong skills in:

- Data cleaning
- Excel analytics
- Dashboard design
- Interactive reporting
- Business insights
